

# SignCAM<sup>®</sup> The Ultimate Cutting System

## SignCAM Automates Workflow From Design Through Manufacturing

- Get accurate letter counts
- Know materials quantities in advance
- Nest objects interactively for best materials utilization
- **Cut the sign** directly from SignCAM

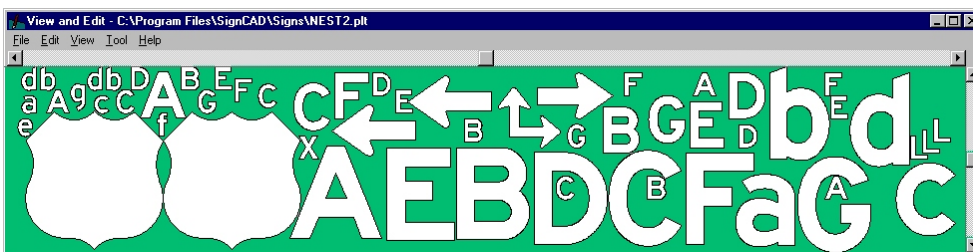

Sign Manufacturing Has Never Been Easier. It's As Simple As **1... 2... 3...**

**1** Design signs in SignCAD. Get used to no speed limits and reduce design time from hours to minutes with SignCAD.

**2** Extract important manufacturing information from sign files with SignCAM. Select the signs for the job, and SignCAM extracts colors, quantities, sizes of letters, arrows, route markers and other objects to be cut.

**3** Use SignCAM's interactive nesting to compress and rotate letters and objects. Then use SignCAM's cut command to send the job to the cutter/plotter.

**You're done!!**

Nest letters and objects interactively to make most efficient use of material, or cut the signs as designed directly out of SignCAM.

## **SignCAM Feature List**

**SignCAM is the option that adds manufacturing capability to SignCAD's powerful design engine. SignCAM adds these features to the already extensive list of SignCAD features:**

SignCAM creates a seamless transition from traffic sign design to manufacturing.

Save design, manufacturing and inventory information from each sign.

Display, print or save reports of objects from a selected group of signs: letter counts by font and size, quantities of arrows, route markers and other objects by size and type.

Get reports of square feet or square meters of material required for selected objects, materials, colors or signs.

Sort the objects to be cut by color, material or other characteristics. Split into separate files and specify how objects are to be cut.

SignCAM optionally arc fits fonts for smooth cutting.

SignCAM allows cutting of entire sign layouts, whole words or individual letters.

Nest individual objects and whole words interactively for best material utilization.

Preview the cutting job.

Send the job to a wide range of cutters and cutter/plotters.

SignCAM prepares large jobs for SignNEST, a separately available high performance automatic nesting and cutting package.

SignCAM is backed by full technical support.

### **Minimum System Requirements:**

Windows XP, Windows 7 (32 or 64), Windows 8 Pro

Requires SignCAD

USB port or Serial port for Cutter communication
