

SignTRACK Web

Complete Sign Inventory

**The ONLY Inventory Software That KEEPS YOUR DATA CURRENT!
Bridge ALL the Gaps - Signing Plans, Sign Standards, Manufacturing, Installation**

- Sign data is always current, because real time updates are made in the field while work is being done.
- Populate SignTRACK from signing plans, where everything that is known about the sign is uploaded starting at the design stage. Nothing more to add except the picture and install date.
- SignCAD/SignCAM Integration allows standards assessments and direct links to manufacturing.
- Map interface shows signs in your vicinity in the field, open work orders, inspection flags, age, material, and any other attributes.
- Track work order progress and keep a complete history including changes over time.
- Online and Offline access in the field.

SignTRACK Web

Features

- SignTRACK Web App for mobile devices, and through the browser from any computer.
- Integrated work order system keeps data current, even during extended periods of new data collection.
- Easy map interface, identifies your location in the field.
- Secure logons and multiple levels of user permissions.
- Unlimited number of records.
- Fully integrated with SignCAD and SignCAM to automate the flow and tracking of important information from design to manufacture and installation.
- Tracks complete history of every edit to every sign.
- Capture and store multiple images of each sign using the mobile device or by importing field photos.
- Search by any attributes or by location to find signs in the field or generate reports from the browser.
- Get inventory and history reports you need: Condition, age, changing values over time, work order progress and complete reports on sign assets.
- Manage contracts and signing activities and generate work orders.
- Straightforward import to add new signs and update records.
- Compatible with GIS systems (sold separately).
